

An atypical task for OMMELIFT 2300 EX

Project EagleTV

EagleTV is a project by Dansk Ornitologisk Forening/ Birdlife Denmark, (DOF) who wants to livestream the everyday life of a white-tailed eagle family, from their nest.

To help set-up the webcam, DOF contacted Kristian Rasmussen from KR-Udlejning Rental, Denmark. DOF needed a lift to negotiate the soft forest floor in order to reach the nest in the treetop. The purpose was to install direct video streaming from the eagles' nest, so ornithologists can follow the white-tailed eagles live on EagleTV 24/7.

It is essential that the eagles are approached with a minimum of noise, as this can affect their general wellbeing. DOF used to climb but has found it less disturbing and more convenient to use a lift instead. The lift battery drive secured that DOF was reducing noise to a minimum.

Articulated riser – perfect for vertical tracking

KR-Udlejning rents out for both private and business customers. It is crucial for the company that the lifts runs smoothly and the customers don't experience operational problems.

The 2300 EX trailer mounted lift has articulated riser which enables reach across branches and similar. The dual parallelogram makes manoeuvring vertically alongside the trunk possible.

After DOF has used the Ommelift, they have decided to use this as the standard method for accessing the eagles' nest. The next project for the 2300 EX will be to ring the eaglets.

Eagle from the nest, Lolland, Denmark.

"We are happy to assist project EagleTv. With the Ommelift DOF could quickly access the eagle nest without disturbing the eagles. "

Kristian Rasmussen, KR-Udlejning

Trailer-mounted Ommelifts

- ✓ *Compact dimensions*
- ✓ *User-friendly controls*
- ✓ *Increased outreach*
- ✓ *Minimum noise and no pollution with green battery power*

Demand for trailer-mounted Ommelifts

KR-Udlejning services both private and business customers. Their lifts must work every time, and customers must not experience operational problems.
